DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 6-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Baek et al (KR 2001-0018906A and its English abstract).

Baek teaches (see English abstract) anti-reflection composition containing a polymer of formula 1 (which is shown on the abstract) as a hardening agent and a polyvinyl phenol as a light-absorbing agent (this compound also teaches present adhesivity enhancer). Baek also teaches the use of a thermal acid generator (see pg.4, line 6 of Korean document). According to PTO's on-site English translation of the Korean document, in Example 10, Baek applies his anti-reflection composition onto a silicon wafer and heat-treat the wafer at 205oC for 2 minutes. After applying a photoresist onto the anti-reflective coating, the photoresist film is exposed to ArF radiation, baked again at 110oC for 90 seconds and then developed to obtain a pattern. Baek's invention is used in manufacturing semiconductor devices (see under the summary section on pg.1 of Korean document). Thus, Baek teaches present invention of claims 1-3 and 6-15 (present claim 1 does not require that the light absorbing agent and the adhesivity enhancer of Formula 1 have to be two separate components).

Allowable Subject Matter

Art Unit: 1752

3. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Baek does not teach present light absorbing agent of Chemical Formula 3 or present thermal acid generator of Chemical Formula 4.

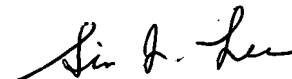

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sin J. Lee whose telephone number is 571-272-1333. The examiner can normally be reached on Monday-Friday from 9:00 am EST to 5:30 pm EST.
